- easy to learn steering handle motion control
- sets up in 20 minutes
- disassembles in 10 minutes
- detailed set-up and operation manual included
- on-site training, and/or camera operation available
- components fit into three cases designed for shipping via air freight

Peace River Studios' GyroPro™ camera stabilizer units liberate you to film while moving in any direction even over rough ground, on untamed rivers, high seas, or choppy air. These units enable you to achieve moves from spectacular to subtle with video and motion picture cameras, including most IMAX cameras, without the use of expensive and confining dolly systems, over-sized boats, or the need for calm in the air. Waiting for the right conditions can mean budget over runs, or perhaps missing the shot altogether. As directors, cinematographers, and designers we have refined this powerful system by making incremental improvements during thirty-five years of work in the field.

In addition to stabilizer rentals, we provide training, script reviews to recommend the best use of our stabilizers, and custom design and fabrication of special mounts.

Please call us for details at (617) 491-6262, or visit our web site [www.peaceriverstudios.com](http://www.peaceriverstudios.com).

*“Peace River’s gyro stabilizer is the stability solution that I’ve called upon repeatedly over the past twenty years. On dozens of IMAX films in every corner of the world, it has given me a single mount to address boat, aircraft and rolling stock shooting with a heavy camera and extreme stability standards. There is nothing like it.”*

*David Douglas, director*
